

Hub Sen 138
Learning Drum

In each of the four modes, a tap on the top of the drum makes a drum sound and provokes a response in lights and speech or music.
 In "abc" mode, the toy will provoke play with flashing lights and a cry of "Hi, lets play the drum--a, b, c" and each pat of the electronic "drum skin" brings a new letter up on display with accompanying speech, all the way from a to z if 26 pats are done in sequence.
 The "123" mode likewise encourages repetitive pats to reveal more numbers in sequence, up to 10.
 In "drum" mode, children are given a sequence of taps to copy and complimented when they get it right, encouraging co-ordination through the use of rhythm.
 In "music" mode, the drum says "let's sing and play". Playing the drum, each pat produces a note and a different panel of lights to illuminate the drum skin.
